Mitigate Growing Cybersecurity & Data Privacy Risk

According to a recent Ponemon Institute study on Global Megatrends in Cybersecurity, more than two-thirds of businesses predict they will experience a data breach or cybersecurity exploit that will diminish shareholder value. In partnering with an experienced service provider such as The MFA Companies®, organizations can effectively assess their cyber risk management operations and implement sound systems and best practices to mitigate growing cyber threats.

What MFA’s Cybersecurity Services Can Do For You

- Evaluate the degree to which your cybersecurity program meets growing regulatory compliance standards
- Isolate shortfalls within existing risk programs and pinpoint concerns that may hinder your ability to mitigate security risks
- Justify future IT and security investments and develop a roadmap for future cybersecurity effectiveness
- Satisfy company stakeholders, investors and/or Boards of Directors interested in formal validation of your company’s cyber controls as well as customers and business partners who expect and benefit from corporate security safeguards and best practices
Cybersecurity

How MFA Can Help

At MFA, our cybersecurity professionals work with customers to assess current cyber control programs, identify gaps, provide remediation recommendations, and examine and report upon risk management programs.

Risk Assessment & Gap Analysis

To successfully mitigate widespread cyber risks, organizations must first assess the state of their cyber programs and identify gaps to drive improvement. In accordance with the National Institute of Standards and Technology (NIST) Framework, MFA’s Cybersecurity Risk Assessment process uses information and inquiry to obtain an understanding of businesses cyber programs, identify gaps and pinpoint concerns that may hinder an organization’s ability to mitigate security risks.

Cybersecurity Readiness Report

MFA’s cybersecurity professionals test an organization’s cyber controls against the NIST framework and deliver a point-in-time review of cyber preparedness. As part of the testing, our experts will review evidence and interview your organization’s executives to understand where security weaknesses live and how the business may be impacted by a cybersecurity incident. The cybersecurity readiness report includes:

- Executive Summary of Findings
- Standard Testing Results and Assessment Criteria
- Remediation Recommendations

SOC for Cybersecurity Report

As an added layer of vigilance against the security risks that threaten organizations, businesses can leverage MFA to provide an attestation of their cybersecurity risk management program. In accordance with the AICPA’s benchmark framework, MFA’s SOC for Cybersecurity Report extends beyond traditional SOC Reports to highlight the prevention, detection and response to growing cyber threats.
